

Thyme Care Fact Sheet

Thyme Care is creating a connected cancer care ecosystem centered on the patient and delivered in partnership with oncologists, health plans, employers, and primary care. We take on full financial risk to help our partners manage oncology populations at scale, aligning incentives to drive better outcomes and lower costs. Our model is tech-enabled but human-powered, led by an oncology-trained care team that guides patients through every step of their journey with personalized, data-driven support.

Thyme Care services include:

24/7 Navigation and Clinical Support: Oncology-trained doctors, nurses, and social workers provide round-the-clock support, including symptom triage, urgent and wellness visits, emotional care, and palliative support. Care navigators ease the practical burdens of cancer by managing appointments, coordinating across providers, helping with insurance claims, and resolving logistical challenges, ensuring seamless, whole-person care throughout the journey.

Provider and Community Integration: We partner with oncologists, primary care, and other specialists to align care across the continuum. We also partner with vetted local resources to close critical social and economic gaps, like access to transportation and financial assistance.

Tech-Enabled, Risk-Aligned Model: Our platform personalizes care at scale, delivers population health insights, and supports full-risk arrangements with payers and providers, driving better outcomes and lower costs.
